⚠️ Elecraft manuals with color images may be downloaded from [www.elecraft.com](http://www.elecraft.com).
Introduction

This manual describes how to install the P3SVGA option in an already-built P3. If you purchased a P3 kit and P3SVGA option together, you will find instructions for installing the P3SVGA included as you build the P3.

The P3SVGA is a single board that plugs into the existing I/O board (see Figure 1). Only a few basic hand tools are needed (see pg 5) to perform the installation. No soldering or wiring is required.

Complete operating instructions for the P3SVGA option are included in the P3 Owner’s Manual revision D or later.

Figure 1. P3SVGA Board Installed (P3 Top Cover Removed).
Customer Service and Support

Technical Assistance

You can send e-mail to k3support@elecraft.com and we will respond quickly – typically the same day Monday through Friday. If you need replacement parts, send an e-mail to parts@elecraft.com. Telephone assistance is available from 9 A.M. to 5 P.M. Pacific time (weekdays only) at 831-763-4211. Please use e-mail rather than calling when possible since this gives us a written record of the details of your problem and allows us to handle a larger number of requests each day.

Repair / Alignment Service

If necessary, you may return your Elecraft product to us for repair or alignment. (Note: We offer unlimited email and phone support, so please try that route first as we can usually help you find the problem quickly.)

IMPORTANT: You must contact Elecraft before mailing your product to obtain authorization for the return, what address to ship it to and current information on repair fees and turnaround times. (Frequently we can determine the cause of your problem and save you the trouble of shipping it back to us.) Our repair location is different from our factory location in Aptos. We will give you the address to ship your kit to at the time of repair authorization. Packages shipped to Aptos without authorization will incur an additional shipping charge for reshipment from Aptos to our repair depot.

Elecraft 1-Year Limited Warranty

This warranty is effective as of the date of first consumer purchase (or if shipped from the factory, the date the product is shipped to the customer). It covers both our kits and fully assembled products. For kits, before requesting warranty service, you should fully complete the assembly, carefully following all instructions in the manual.

Who is covered: This warranty covers the original owner of the Elecraft product as disclosed to Elecraft at the time of order. Elecraft products transferred by the purchaser to a third party, either by sale, gift, or other method, who is not disclosed to Elecraft at the time of original order, are not covered by this warranty. If the Elecraft product is being bought indirectly for a third party, the third party’s name and address must be provided at time of order to ensure warranty coverage.

What is covered: During the first year after date of purchase, Elecraft will replace defective or missing parts free of charge (post-paid). We will also correct any malfunction to kits or assembled units caused by defective parts and materials. Purchaser pays inbound shipping to us for warranty repair; we pay shipping to return the repaired equipment to you by UPS ground service or equivalent to the continental USA and Canada. For Alaska, Hawaii, and other destinations outside the U.S. and Canada, actual return shipping cost is paid by the owner.

What is not covered: This warranty does not cover correction of kit assembly errors. It also does not cover misalignment; repair of damage caused by misuse, negligence, battery leakage or corrosion, or builder modifications; or any performance malfunctions involving non-Elecraft accessory equipment. The use of acid-core solder, water-soluble flux solder, or any corrosive or conductive flux or solvent will void this warranty in its entirety. Also not covered is reimbursement for loss of use, inconvenience, customer assembly or alignment time, or cost of unauthorized service.

Limitation of incidental or consequential damages: This warranty does not extend to non-Elecraft equipment or components used in conjunction with our products. Any such repair or replacement is the responsibility of the customer. Elecraft will not be liable for any special, indirect, incidental or consequential damages, including but not limited to any loss of business or profits.
Preventing Electrostatic Discharge Damage

We strongly recommend you take the following anti-static precautions (listed in order of importance) to avoid trouble:

- Leave ESD-sensitive parts in their anti-static packaging until you install them. The packaging may be a special plastic bag or the component’s leads may be inserted in conductive foam. Parts which are especially ESD-sensitive are identified in the parts list and in the assembly procedures.

- Wear a conductive wrist strap with a series 1-megohm resistor. If you do not have a wrist strap, touch a ground briefly before touching any sensitive parts to discharge your body. Do this frequently while you are working. You can collect a destructive static charge on your body just sitting at the work bench. **DO NOT attach a ground directly to yourself as this poses a serious shock hazard.**

- Use a grounded anti-static mat on your work bench.

- If you choose to use a soldering iron to work on your P3 for any reason, be sure your iron has an ESD-safe grounded tip tied to the same common ground used by your mat or wrist strap.

**Tools Required**

1. #1 size Phillips screwdriver. To avoid damaging screws and nuts, a power screwdriver is **not** recommended.
2. Pliers or wrenches for installing 1/4” (6.4mm) nuts 3/16” (4.8 mm) jack screw nuts.

The following tools are strongly recommended:

1. ESD wrist strap.
2. Static dissipating work pad.
Parts Included

The following parts should be included in your kit. Check to ensure you have them all. If any parts are damaged or missing, contact Elecraft for replacements (see Customer Service and Support, pg 4).

**NOTE:** Do not attempt to power your P3 from the K3’s 12V outlet unless it is labeled 1.0A Max. See Connections in the P3 Owner’s manual Quick Start Guide for details. | 1 | E850427 |
Installation Procedure

☐ Disconnect power and all cables from your P3.

☐ Remove the six screws to free the top cover (Figure 2 ①) and lift the cover off. There is a slot at one end that you can use to lift the cover once it is free.

⚠️ Whenever you remove screws from a panel, if one screw seems too tight to loosen without damaging it, first loosen the other screws then try again. Sometimes one screw binds in its hole when the other screws are tightened.

Figure 2. Preparing the P3 to Install the P3SVGA Board.

⚠️ CAUTION: Touch an unpainted metal ground or wear a grounded wrist strap before touching components or circuit boards inside the P3. See Preventing Electrostatic Discharge Damage on page 5 for more information.

☐ Remove the four jack screw nuts and lock washers to free the I/O board (Figure 2 ②)
Lift the I/O board out of the P3 and unplug the ribbon cable (Figure 2 3). Take care not to damage the board. Hold the board while working the connector side to side to “walk” it off of the pins as shown in Figure 3.

Unplug the TMP coaxial cable from the RF board (Figure 2 4). This is a friction-fit connector. Do not pull on the black coaxial cable. Grip and pull only on the metal connector.

Remove the four screws holding the rear panel in place (Figure 2 5 ) and lift the rear panel off of the P3.

Remove and reverse the mounting hardware for both rear feet as shown in Figure 2 6 ). Install the hardware as shown in Figure 4.

INSTALLATION HINT: Put the washer and screw in the foot opening and press your finger over the opening until the threads on the nut are caught by the screw. It may help to turn the unit over so gravity helps. Once the nut is started pull the foot away from the bottom cover while tightening the screw. The friction of the washer against the bushing inside the foot will keep the nut from turning as you tighten.
Remove the plastic covering from the AUX. DATA, EXT. DISPLAY and KEYBOARD openings on the rear cover, but leave the covering over the SENSOR opening (see Figure 5). The plastic cover will snap apart at the score mark as you bend it away from the panel.

Figure 5. Removing Hole Covers.

Mount the P3SVGA board on the I/O board as shown in Figure 6. The connector on the P3SVGA board mates with the connector on the I/O board that originally received the ribbon cable. Be sure the connectors are aligned so that all pins engage. To avoid over-stressing the boards, place the I/O board on a firm surface. You may need to rock the P3SVGA board slightly while pressing down to “walk” the pins into the connector like you did when removing the ribbon cable earlier.

Figure 6. Mating the I/O and P3SVGA Boards.
Connect the ribbon cable to the P102 on the P3SVGA board as shown in Figure 7. Place the boards on a firm surface to avoid over-stressing them. **Be certain that:**

1. The connector is aligned so that it covers all of both rows of pins.
2. The ribbon cable is oriented so that the red wire is at the pin 1 end of the connector as shown. Your ribbon cable may exit the connector toward the board instead of away from it as shown here. That is not a problem as long as you orient it to place the red wire at the pin 1 end as shown.

![Figure 7. Connecting the Ribbon Cable to the P3SVGA and I/O Boards.](image)

Mount the boards on the rear panel as shown in Figure 8. Start all of the jack screw nuts before tightening them. Do not over-torque them. It is possible to twist the head off of the threaded section, especially if you use a wrench.

![Figure 8. Mounting Boards in Rear Panel.](image)
Replace the rear panel assembly on the P3 as shown in Figure 9. Tilt the assembly so the P3SVGA board does not strike the screw head for the rear foot. The screw head fits in a notch on the P3SVGA board. Secure the rear panel assembly with the screws you removed earlier (Figure 2).

Figure 9. Replacing the Rear Panel on the P3.

Reconnect the TMP cable to the rear panel RF board (Figure 2).

Replace ribbon cable in the clip on the side panel (Figure 2). It is important that the excess cable not be allowed to float freely in the P3 where it may be close to the RF board to avoid digital interference on the P3 display.

Replace the top cover on the P3 with the notch to the rear using the screws you removed earlier:

⚠️ REPLACE ALL THE SCREWS!

The P3’s chassis strength depends upon all the screws being in place. Be sure to replace all the screws and verify they are tight, but do not over-torque the screws.

That completes the installation of the P3SVGA option in your P3. Complete operating instructions are included in your P3 Owner’s Manual, Revision D or later.
